Acoustic panel

The Oak Acoustic Panel is crafted from natural solid oak and designed to enhance the acoustic performance of any interior. Its authentic wood structure ensures durability, longevity, and a premium appearance.

The panel features three mounting battens at the joint areas, providing secure attachment and stable installation on walls or ceilings.

The product can be custom-made according to your drawings and technical specifications, with the option to combine elements and adjust shapes and dimensions.

Due to the natural structure of oak, the wood grain may differ from the photo, as each piece has its own unique and unrepeatable pattern.

The panel integrates seamlessly into both residential and commercial interiors, including living rooms, bedrooms, offices, studios, meeting rooms, and restaurants.
